

GOVERNANCE OF THE DEPLOYMENT OF SOLAR GEOENGINEERING

Research Workshop Conducted by the Harvard Project on Climate Agreements

Thinking About Climate Change – An Economic Perspective

Sept. 27, 2018

Jim Stock

Department of Economics, Harvard University

Premises

1. Once you start, you better not stop

Premises

1. Once you start, you better not stop
2. Things break

Premises

1. Once you start, you better not stop
2. Things break
3. At 600ppm, cessation of 1° C geoengineering would raise temps by ~0.7° C within 10 years

Premises

1. Once you start, you better not stop
2. Things break
3. At 600ppm, cessation of 1° C geoengineering would raise temps by ~0.7° C within 10 years
4. SG has uncertain limitations and uncertain/unknown side effects

Premises

1. Once you start, you better not stop
2. Things break
3. At 600ppm, cessation of 1° C geoengineering would raise temps by ~0.7° C within 10 years
4. SG has uncertain limitations and uncertain/unknown side effects
5. SG, or a SG implementation protocol takes the pressure off CO2 mitigation

Premises

1. Once you start, you better not stop
2. Things break
3. At 600ppm, cessation of 1° C geoengineering would raise temps by ~0.7° C within 10 years
4. SG has uncertain limitations and uncertain/unknown side effects
5. SG, or a SG implementation protocol takes the pressure off CO2 mitigation

Implications (food for thought)

1. Dynamics
2. Stochastic
3. Robust control
